# Identity use cases (circa 2007)

01 Simple login – forms and cookies

---

02 Single sign-on across sites – SAML

---

03 Mobile app login – ???

---

04 Delegated authorization – ???

---

# Don't do it This Way!

(Password Anti-Pattern)

## Are your friends already on Yelp?

Many of your friends may already be here, now you can find out. Just log in and we'll display all your contacts, and you can select which ones to invite! And don't worry, we don't keep your email password or your friends' addresses. We loathe spam, too.

Your Email Service

YAHOO! MAIL

AOL Mail

Gmail

Your Email Address

(e.g. bob@gmail.com)

Your Gmail Password

(The password you use to log into your Gmail email)

[Skip this step](#)

**Check Contacts**

# Don't do it This Way!

(Password Anti-Pattern)

Step 1  
Find Friends

Step 2  
Profile Information

Step 3  
Profile Picture

### Are your friends already on Facebook?

Many of your friends may already be here. Searching your email account is the fastest way to find your friends on Facebook.

 **Gmail**

Your Email:

Email Password:

**Find Friends**

 Facebook will not store your password.

 **Yahoo!**

**Find Friends**

 **Windows Live Hotmail**

**Find Friends**

 **Other Email Service**

**Find Friends**

## The Delegated Authorization Problem

HOW CAN I LET A WEBSITE  
ACCESS MY DATA, WITHOUT  
GIVING IT MY PASSWORD?

## A lot of confusion around OAuth:

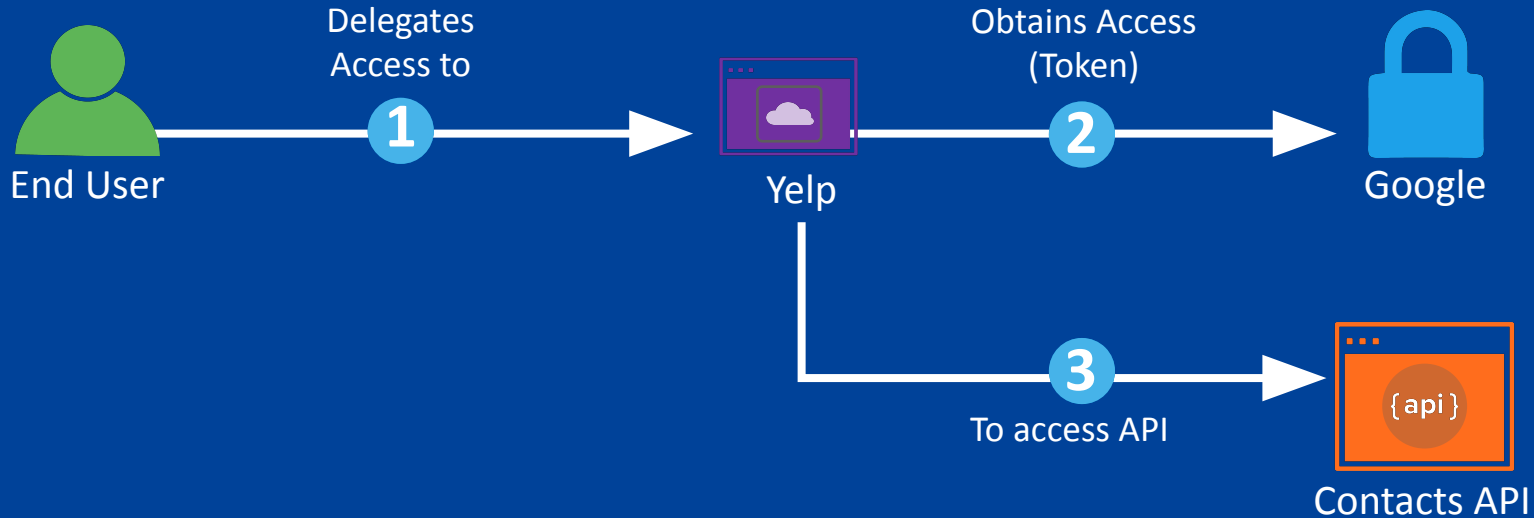

- ⇒ Terminology and jargon
- ⇒ Incorrect advice
- ⇒ Hard to find a life-like example

# The Hotel Analogy

---

# OAuth 2.0: App Scenario

# OAuth 2.0 Terminology

Hotel	App	OAuth	Description
Hotel Guest	End User	Resource Owner	Wants a Client App to do something on their behalf
Hotel	Yelp	Client Application	Needs authorization to interact with an API on behalf of a user
Hotel Receptionist	Google	Authorization Server	Grants access (in the form of tokens) to an app
Hotel Room	Contacts API	Resource Server	Has an API that an app can use if presented with a token

# Delegated Authorization with OAuth 2.0

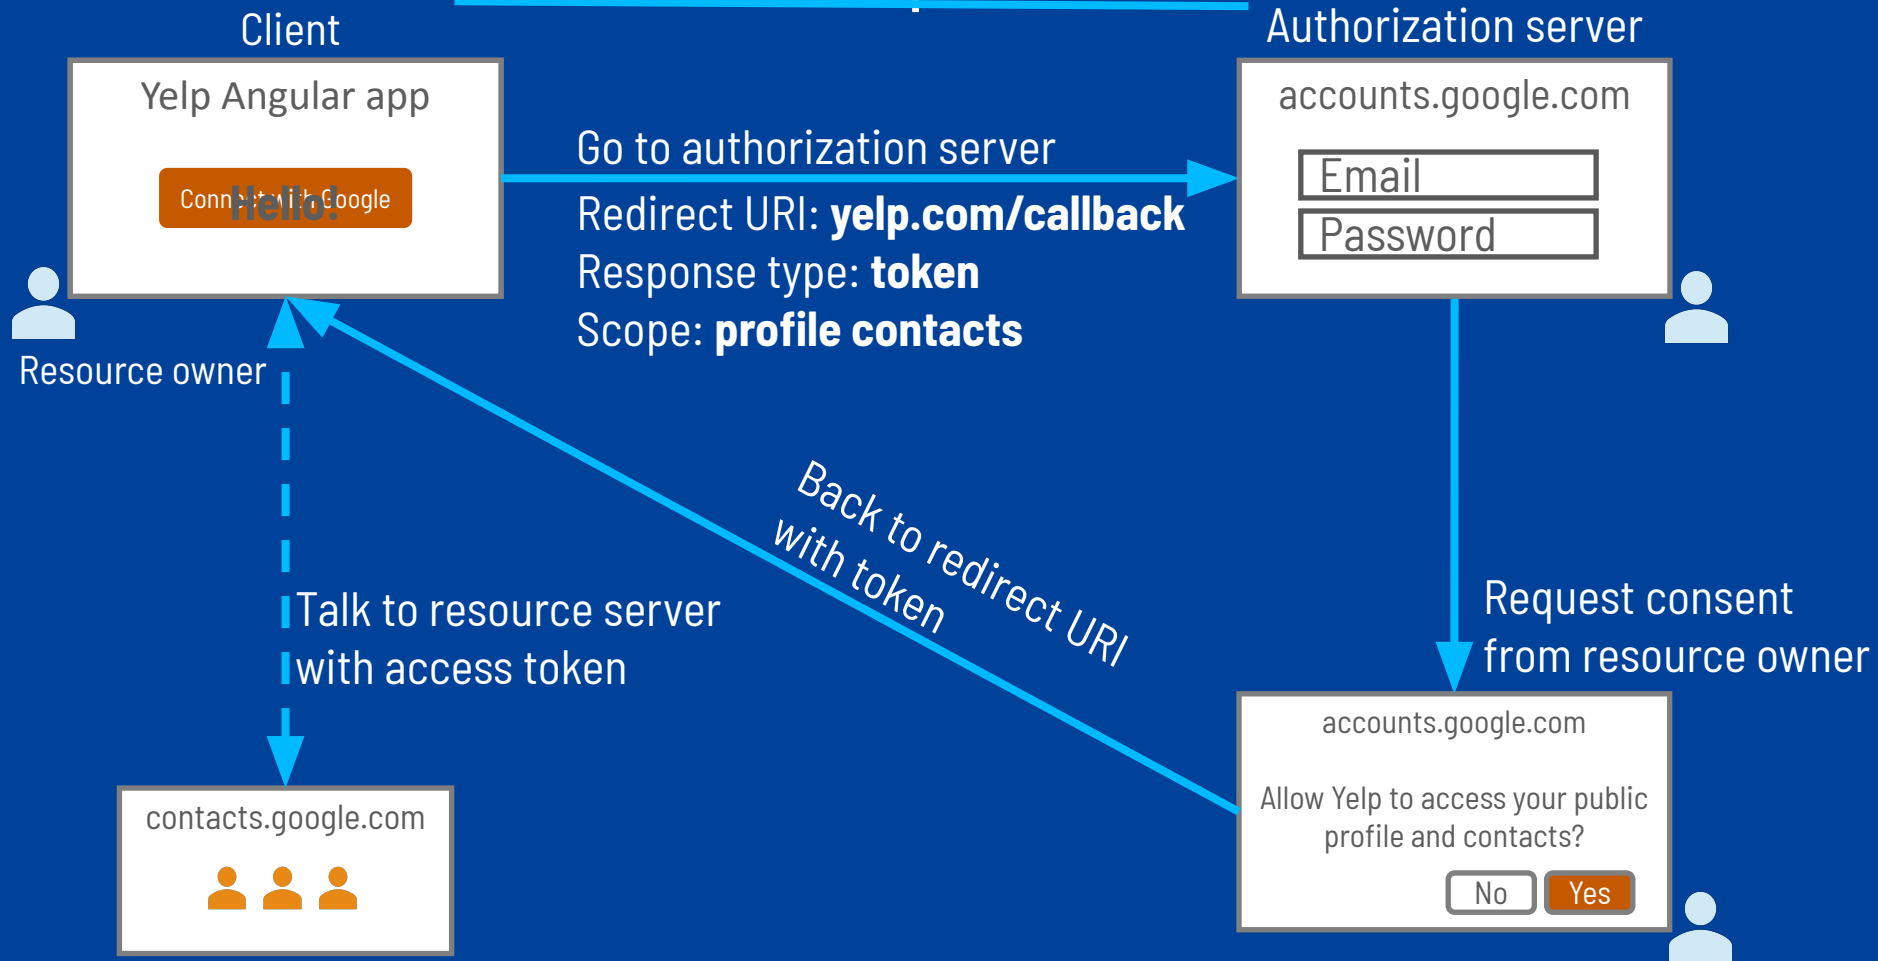

I trust Gmail and I kind of trust Yelp. I want Yelp to have access to my contacts only.

yelp.com

# OAuth 2.0 implicit flow

# DEMO

## Implicit Flow Detector

# Confidential Clients

**Application running on a server**

Has the ability to keep strings secret  
since code is running in a trusted  
environment

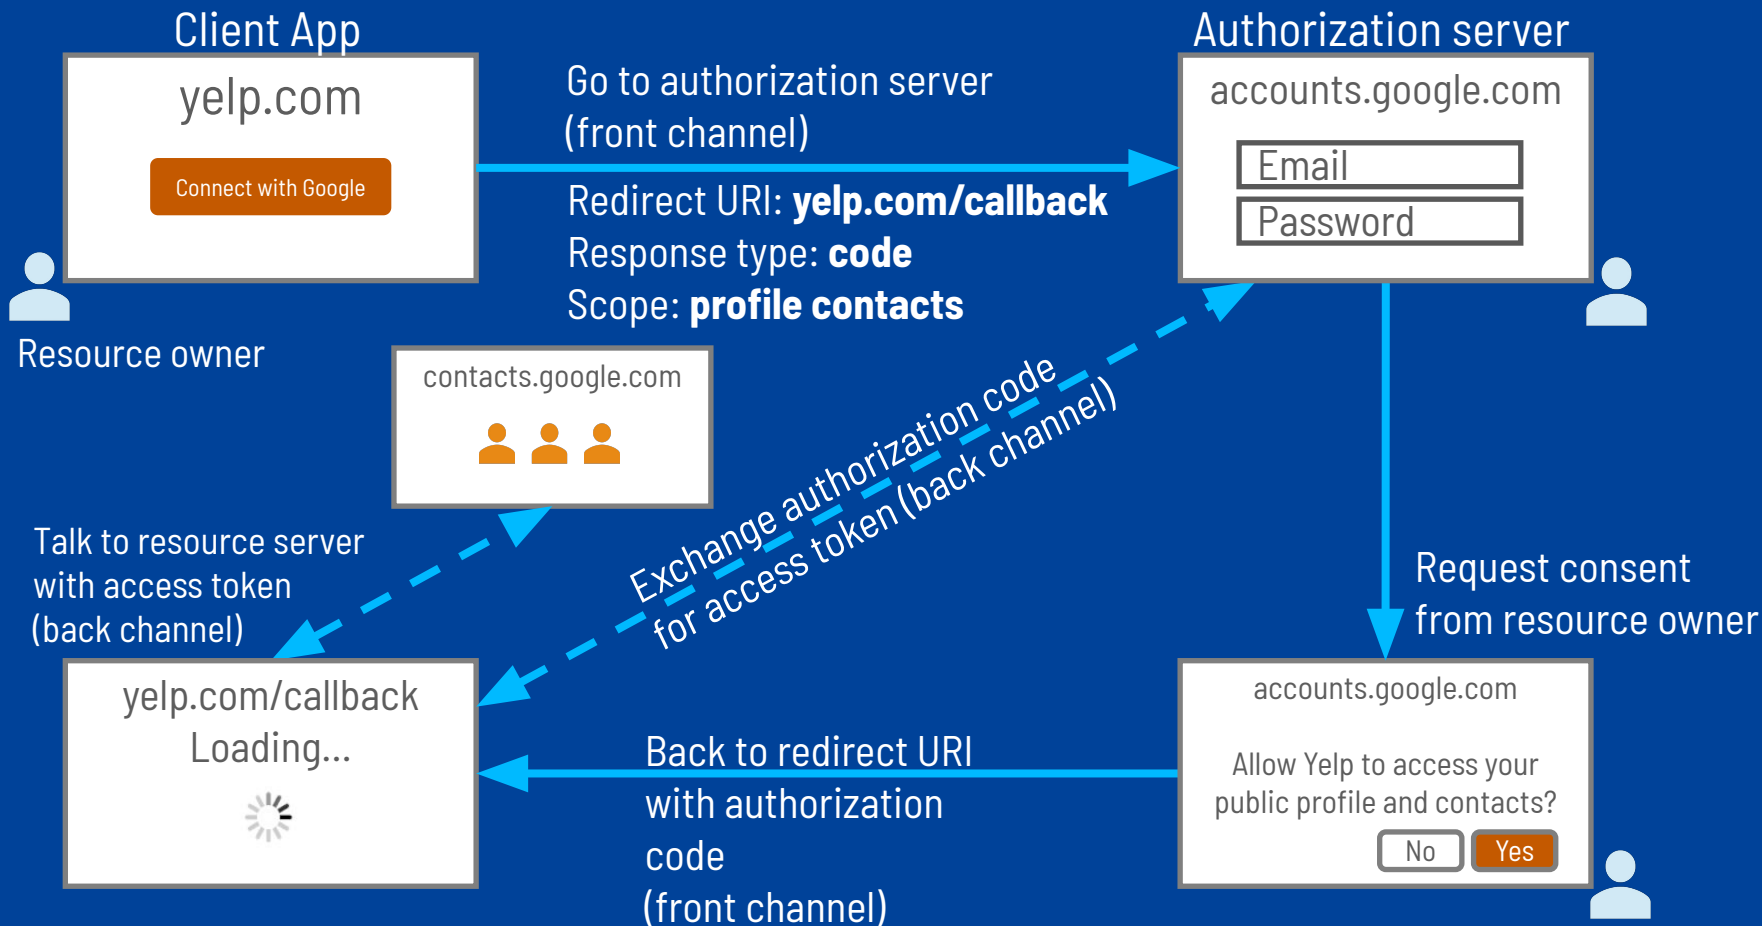

# Public Clients

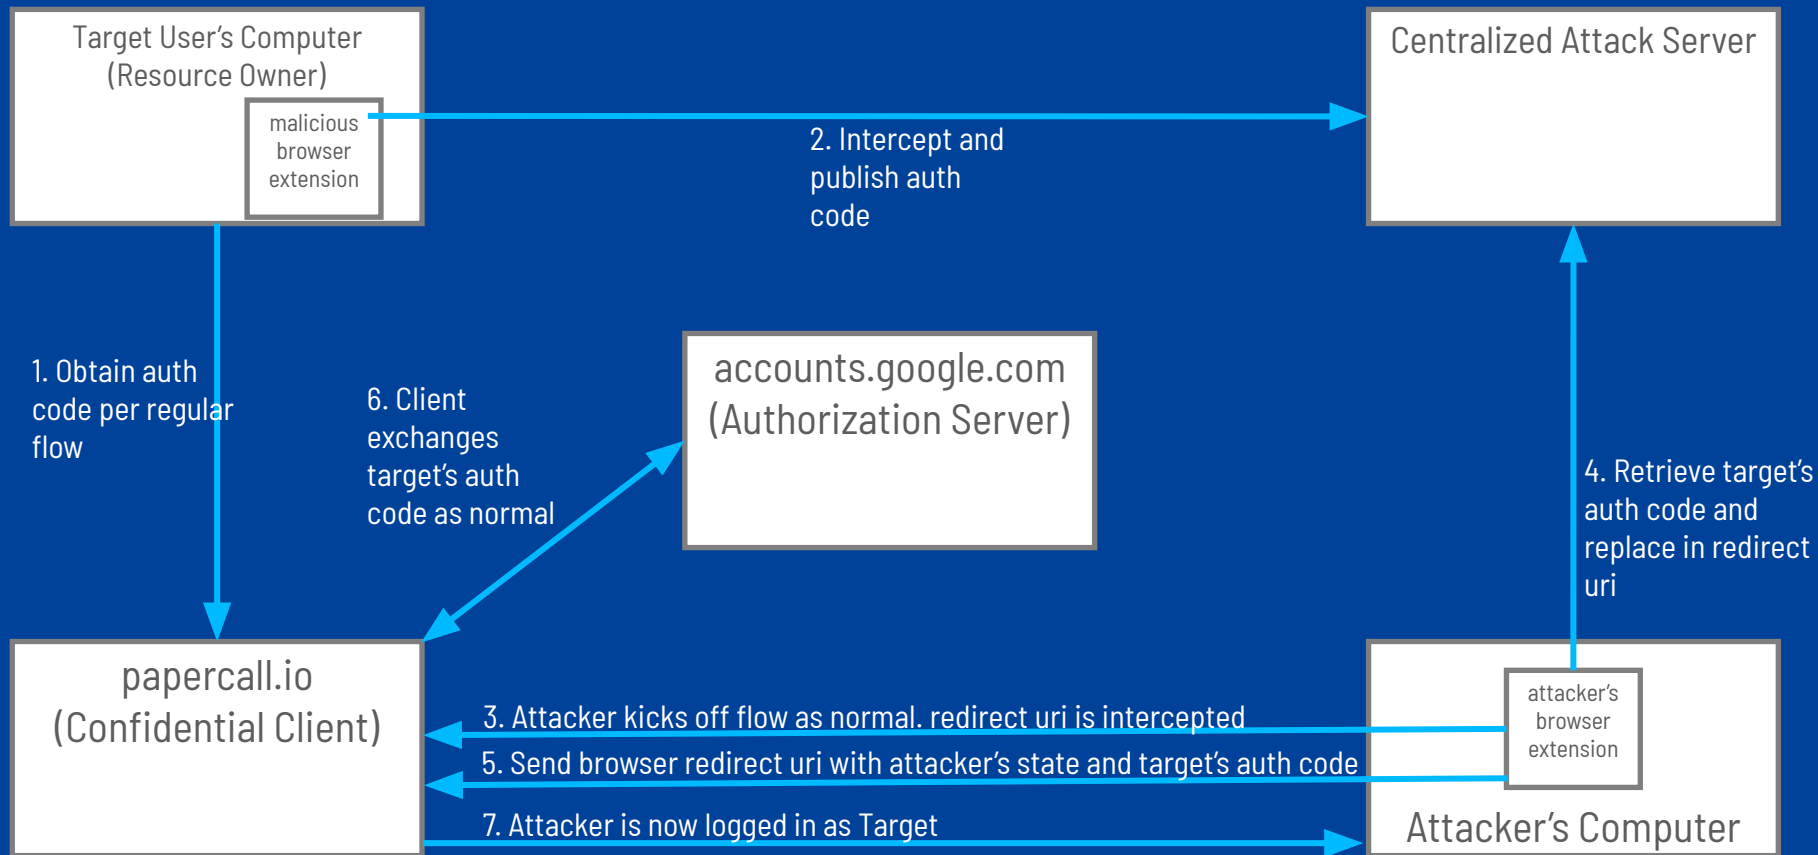

**The application can't keep strings secret**

Javascript/Single-Page apps: "view source"  
Native apps: decompile and extract strings

# OAuth 2.0 authorization code flow

# Authorization Code Injection Attack

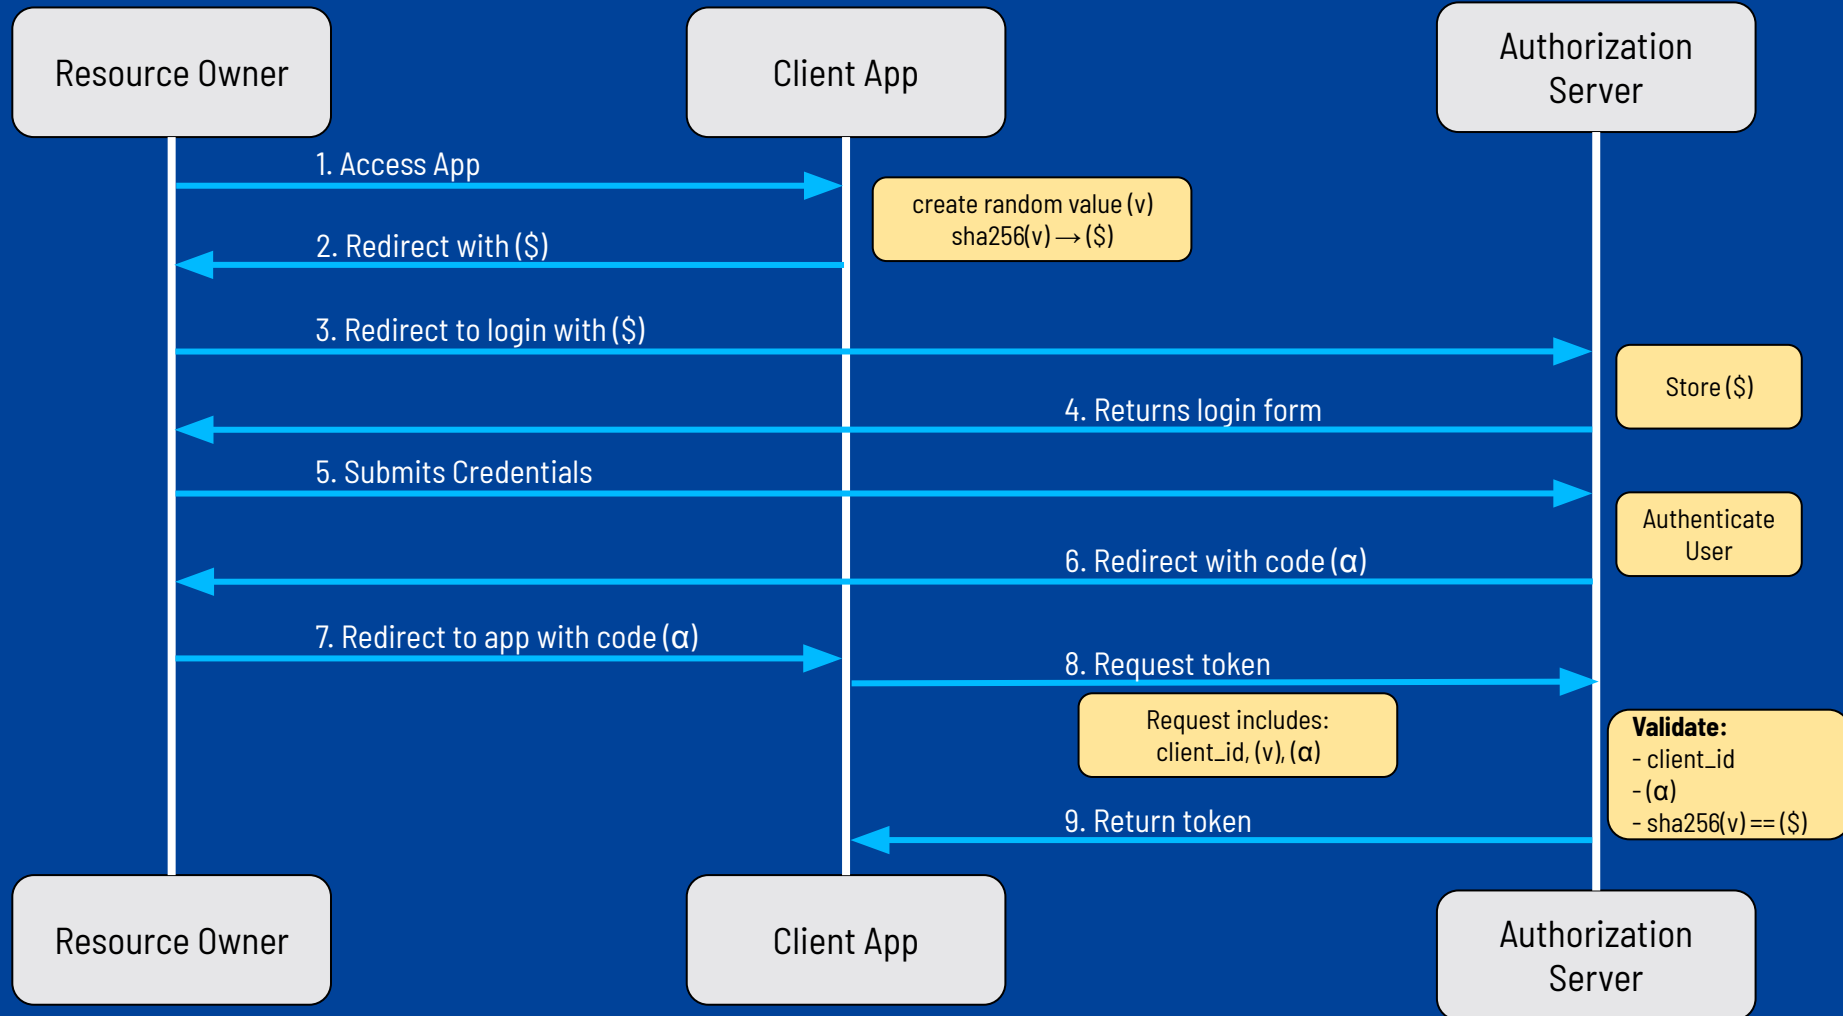

# DEMO

## Auth Code Injection
